

1 What certifications are truly valuable or necessary in India for building a strong cybersecurity career?

2 Does my planned certification path (Google Cybersecurity Certificate → TryHackMe SOC Level 1 → CEH/eJPT → OSCP) make sense for the Indian job market, or would you modify it?

3 Would you recommend focusing on one strong certification instead of pursuing multiple smaller ones?

4 Where do you suggest I find resources and reference materials?

5 Which books would you recommend at my current stage? I am currently reading Network and Communication (Forouzan, 6th edition) and The Hacker Playbook 2.

6 How do I know when I've understood a topic deeply enough to move on?

7 Should I focus more on building tools or solving CTFs at this stage?

8 Should I prioritize understanding how exploits work internally rather than focusing mainly on tools?

9 What skills are difficult to learn but highly valuable in the long term?

10 What types of real-world security projects do professionals typically work on?

11 What kind of projects would make my resume internships?

12 What skills do freshers usually lack when they enter cybersecurity roles?

13 If you were to guide me for the next four years to make me job-ready, what would that roadmap look like?
